

Module Code: ITS66704 (Sept 2024)

Module Name: Advanced Programming

Assignment No./Title	Part A – Analysis & Design
Course Tutor/Lecturer	Mugilan Ravntheran
Submission Date	Week 09: 22/11/2024 (PART A - ANALYSIS AND DESIGN)
Student Name, ID and Signature 1. Amira Amani Binti Mohamad Anuar (0358323) 2. Cassidy Chan Yin Hei (0373605) 3. Farina Elia Binti Mohamad Fadzil (0371047) 4. Hammad Ruxshan Juhardeen (0356865) 5. Tahinuma Raisa (0371303)	

Declaration *(need to be signed by students. Otherwise, the assessment will not be evaluated)*

Certify that this assignment is entirely my own work, except where I have given fully documented references to the work of others, and that the material contained in this assignment has not previously been submitted for assessment in any other formal course of study.

5. User Interface (Prototype)	Cassidy

1.0 Concepts & System Analysis

Introduction

The fitness tracking app's main objective is to enhance users' ability to track and improve their fitness, as well as encourage more people to develop a healthy lifestyle. Through this app, users would have the convenience and accessibility to support their journey to a healthier body, mind, and spirit. To achieve this, the app offers features like profile management, goal setting, exercise logging, and progress visualization. These features would allow users to set and monitor fitness goals, track exercises, log nutrition at the tip of their fingertips. The app caters to individuals of all ages, genders, and fitness levels who wish to improve their health, fitness, and overall well-being.

Technology Stack

The fitness tracking app is developed using JavaFX, which offers built-in tools like FXML for designing and defining the UI layout, CSS for styling, and APIs for integration with third-party tools and ensuring security. Java is used to implement core functionalities, handling both frontend and backend logic. For data storage, the app adheres to a local Data Access Object (DAO) pattern, utilizing text and binary files to store and retrieve user data such as activity logs and fitness goals.

Functionality of Application

The app provides several key functionalities to ease users through their fitness journey. First, users can create profiles and input personal details such as name, age, weight, body measurements, and login credentials. These profiles can be easily edited and updated whenever necessary. Next, users can set personalized fitness goals, such as weight loss, calorie goals, steps per day, and running distance. As they achieve these goals, they can set new targets to keep pushing their limits. Setting these goals is crucial for users to improve themselves and serve as motivation for them to break their personal records. Besides that, there is also a section for users to log their daily workout plans, specifying the type, intensity level, and duration of each session. In addition to the manual logging of fitness data, the app offers an activity

tracking feature through integration with wearable devices such as smartwatches and fitness trackers. This feature automatically syncs data from the devices. Then, users can also monitor their diet by tracking daily meals, calorie intake, and nutrient consumption. Healthy eating is important for individuals to achieve optimal health, alongside exercises and other fitness activities. To make the app more attractive and user-friendly, the data that has been input by the users are used to generate charts and graphs that illustrate trends and progression over time. The app also implements user authentication as a security measure to keep users' data safe and secure. Users are required to enter their password when accessing the app. Lastly, users can access customer support offered in the app itself when they need assistance with navigation, feature inquiries, and technical difficulties. This would also serve as a feedback channel for addressing users' concerns so that app developers can take immediate action to improve the app's functionality.

2.0 Data Attributes & Method

This section outlines the foundational attributes and corresponding methods for the **Tracker App**. It will incorporate a comprehensive data model to capture and store essential user information, exercised data, dietary intake, and progress metrics. Key data attributes will include user profiles, exercise logs, dietary records, and authentication credentials. The app will implement methods for user registration and login, exercise log creation and editing, dietary entry and tracking, fitness goal setting and monitoring, and progress visualization through charts and graphs. By effectively managing and analyzing this data, the app will provide users with personalized insights, motivation, and accountability to achieve their fitness objectives

Attributes

Data	Attributes
1. User Profile	• name (String) • age (int) • weight (double) • height (double) • username (String) • password (String) • fitnessGoals (List<String>)
2. Exercise Logging	• exerciseType (String) • duration (int) • intensity (String) • caloriesBurned (double)
3. Nutrition Tracking	• foodItem (String) • calories (double) • macronutrients (String)
4. Progress Tracking	• weightLog (List<Double>) • distanceRun (List<Double>) • caloriesBurnedLog (List<Double>) • progressMetrics (Map<Date, Double>)

Methods

Data	Methods
1. User Authentication	- login(username: String, password: String) - register(newUser: UserProfile) - encryptPassword(password: String)
2. CRUD Operations	- createUserProfile(profile: UserProfile) - updateFitnessGoals(userId: int, goals: List<String>) - deleteExerciseLog(logId: int) - retrieveExerciseLogs(userId: int)
3. Data Visualization	- generateWeightChart(userId: int) - generateCaloriesBurnedGraph(userId: int) - filterProgressByDateRange(userId: int, startDate: Date, endDate: Date)
4. File Handling	- saveDataToFile(userId: int) - loadDataFromFile(userId: int)
5. Fitness Goal Management	- setGoal(userId: int, goal: String) - viewGoals(userId: int)
6. Device Integration	- syncDeviceData(deviceId: String, userId: int) - logActivityFromDevice(deviceData: Map<String, Object>)

3.0 UML Use Case Diagram

Figure 1.0 – Authentication

The diagram above is a use case diagram for an authentication system of the fitness tracker app. It outlines the interaction between two primary actors: the User and the System, illustrating the various functions provided by the system. Based on the application, User represents the user of the app directed to the login screen. System denotes the backend responsible for executing authentication-related processes. In this authentication scenario, User can **register** a new account within the system, **log in** to access their account, **reset password**, **log out** to exit the system, and **change password** to update their account credentials.

There are two relationships that can be identified in the authentication use case diagram. The `<<include>>` indicates mandatory functionality. In this scenario, “Register Account” includes “Log In” as part of the process to authenticate a newly created account. The `<<extend>>` suggests optional or conditional functionality. For instance, “Reset Password” extends “Log In,” as it is only invoked under specific circumstances, such as when a user forgets their password.

Figure 1.1 – User Profile Management

The diagram above shows the User and System. In this scenario, User is able to **create profile** where it will display their basic information, have the liberty to **edit profile** so they can update their latest information, **view the profile** they've created, **delete profile** in case they choose to leave the application, and **view profile progress statistics**.

Figure 1.2 – Fitness Goal Setting

The diagram above displays User where they are able to **add new fitness goal**, **edit their existing goal**, **delete fitness goal** if they changed their mind, and **view goal progress**.

Figure 1.3 – Exercise Logging

The diagram above depicts User's ability to **log exercise** where they record details about their exercise sessions, **view exercise history** and review their past record, **update exercise entry** where they can modify existing entries, **delete exercise entry** incase user wants to remove unwanted entries, **log meals intake** where user can record their food intake, and **update meals intake**. In the use case where user log exercise, the system is able to **calculate the number of calories burned**. The <<include>> relationship depicts where calculate calories burned use case is included within the log exercise use case.

Figure 1.4 – Device Integration

The diagram displays 3 actors, the **User**, **System**, and **Wearable Devices**. The Wearable Devices indicates external devices, such as a smart band tracker, that can interact with the system. The first use case is **sync data from wearable device**, where user can synchronize data from their wearable device to the system. The second use case is **view synced data** where user can access and view the data that has been synced from the system to the device. User is also able to **update data from device** and modify the data on the system that has been synced. The fourth is **find other devices** and discover other wearable devices that can be integrated with the system. Lastly, the user can manage and maintain a list of **paired devices** that are connected to the system.

4.0 UML Class Diagram

Figure 2.0 – User Management

In User Management diagram, there are two classes that can be seen, which is User and UserSettings. User class contains the following attributes (*userID*, *username*, *emailAddress*, *password*) and methods (*register()*, *login()*, *logout()*, *resetPassword()*, *saveToFile()*, *loadFromFile()*). UserSettings class contains the following attributes (*preferenceID*, *theme*, *notifications*) and methods (*updateSettings()*). The User and UserSettings classes are connected by a **one-to-one** relationship.

Exercise Logging Diagram

Figure 2.1 – Exercise Logging Diagram

In Exercise Logging diagram, there two classes that can be identified, which is **ExerciseLog** and **ExerciseStatistics**. ExerciseLog contains the following attributes (*logID*, *userID*, *exerciseType*, *duration*, *caloriesBurned*) and methods (*logExercise()*, *viewLogs()*, *saveToFile()*, *loadFromFile()*). ExerciseStatistics contains the following attributes (*totalCalories*, *totalDuration*) and methods (*calculateStats()*, *generateReport()*). The ExerciseLog and ExerciseStatistics classes are connected by a **one-to-one relationship**.

Fitness Goal Management Diagram

Figure 2.2 – Fitness Goal Management Diagram

In the diagram above, there are three classes: **Fitness Goal**, **GoalProgress**, and **ProgressChart**. FitnessGoal contains the following attributes (goalID, userID, goalType, targetValue, currentValue, deadline) and methods (addGoal(), updateGoal(), deleteGoal(), saveToFile(), loadFromFile()). GoalProgress contains the following attributes (progressID, goalID, progressDate, progressValue) and methods (logProgress(), viewProgress()). ProgressChart contains the following methods (generateChart(data: List<GoalProgress>), displayChart()). A one-to-many relationship exists between FitnessGoal and GoalProgress while a **one-to-one** relationship exists between GoalProgress and ProgressChart.

Nutrition and Diet Tracking Diagram

Figure 2.3 – Nutrition and Diet Tracking Diagram

In the diagram above, there are two classes: **MealLog** and **NutritionSummary**. MealLog contains the following attributes (mealID, userID, mealDescription, calories, macronutrients) and methods (addMeal(), updateMeal(), deleteMeal(), saveToFile(), loadFromFile()). NutritionSummary contains the following attributes (summaryID, userID, totalCalories, macronutrients) and methods (calculateSummary(), viewSummary()). A **one-to-one** relationship exists between MealLog and NutritionSummmary.

Device Integration Diagram

Figure 2.4 – Device Integration Diagram

In the diagram above, there are two classes: **DeviceData** and **Device**. The **Device** class contains the following attributes (`deviceID`, `deviceName`, `connectionStatus`) and methods (`connectDevice()`, `disconnectDevice()`, `syncData()`). **DeviceData** contains the following attributes (`dataID`, `deviceID`, `userID`, `dataType`, `value`, `timestamp`) and methods (`saveToFile()`, `loadFromFile()`). A one-to-many relationship exists between **Device** and **DeviceData**.

5.0 UI Prototype

Introduction

This report details the design and development process of the FTA, covering key modules such as user profile management, fitness goal setting, exercise and nutrition logging, and data visualization. It also discusses the prototyping process, focusing on the art and design aspects, to create an intuitive, visually appealing interface that enhances user experience. Through this project, the team aims to deliver a tool that promotes healthier lifestyles and aligns with Sustainable Development Goal 3 (SDG 3) – ensuring healthy lives and promoting well-being for all ages.

Prototyping

Below are the explanations of the prototype for our Fitness Tracker Application (FTA) based on the screenshots:

Login & Sign-Up Page

There are separate login and sign-up screens where users can either sign in or create a new account. The Login page is designed for returning users to access their accounts securely. It serves as the initial point of entry, where users authenticate themselves before accessing their personalized fitness data, goals, and progress. The Sign-Up page allows new users to create an account and personalize their profile within the app.

Navigation details:

1. Clicking the Sign-in and Sign-up button will navigate to the Home page.
2. Clicking the 'No account? Sign up' button will navigate to the Sign-up page.
3. Clicking the 'Already have account? Sign in' button will navigate to the Log-in page.

Set Up Page:

The Set-Up page is the initial setup screen where users can enter personal fitness-related information and set goals. This screen collects important information about the user's current fitness level and goals so that you can personalize the app experience.

Navigation details:

1. Clicking the Done button will navigate to the Home page.
2. Clicking the Skip button will navigate to the Home page.

Home Page:

The Home page is like a hub or dashboard where users can access all the main features of the app. Here, users can get an overview of their progress, an overview of their fitness goals as well as basic features such as workout plans, daily monitoring, social features and support. Users can access 'Plan', 'Coach', 'Today', 'Social', 'Live' and 'Profile' sections. The screens are designed to be easy to navigate. The most important elements have been placed in such a way that the user does not get lost while navigating through the sections and can find them quickly.

Navigation details:

1. Clicking the Filter button will navigate to the Filter page.
2. Clicking the Plans button will navigate to the Plans page.
3. Clicking the Live button will navigate to the Live page.
4. Clicking the Coach button will navigate to the Coach page.
5. Clicking the Today button will navigate to the Today page.
6. Clicking the Social button will navigate to the Social page.
7. Clicking the Profile button will navigate to the Profile page.

Filter Page:

On the Filters page, users can limit the options and content displayed in the app. For example, you can display workouts, programmes and coaches that meet specific criteria such as duration, difficulty and goals. From this page, you can enhance the user experience by customising the content to your personal preferences. After a user selects a filter, they can click this button to see results based on their selection.

Navigation details:

1. Clicking the Filter button again will navigate to the Home page.

Plans Page:

The 'Plans' section provides you with planned training paths and fitness programmes to achieve your fitness goals. This section provides pre-designed plans that can be organised by duration, intensity and area of interest (strength, aerobics, flexibility, etc.), making it easy for you to create a fitness plan. For You: a personalised section that recommends tailored plans based on your profile information, fitness level and previous activity history. Suggested: general plans recommended by the app based on popular workouts, seasonal themes and popular fitness programmes.

Navigation details:

1. Clicking the Course button will navigate to the Course page.
2. Clicking the Live button will navigate to the Live page.
3. Clicking the Coach button will navigate to the Coach page.
4. Clicking the Today button will navigate to the Today page.
5. Clicking the Social button will navigate to the Social page.
6. Clicking the Profile button will navigate to the Profile page.

Live Page:

The Live page provides real-time fitness activities such as fitness classes, yoga sessions, and live trainers. Users can interact in real time by following an instructor or joining a training session.

Navigation details:

1. Clicking the Course button will navigate to the Course page.
2. Clicking the Plans button will navigate to the Plans page.
3. Clicking the Coach button will navigate to the Coach page.
4. Clicking the Today button will navigate to the Today page.
5. Clicking the Social button will navigate to the Social page.
6. Clicking the Profile button will navigate to the Profile page.

Coach Page:

The Coach page is intended to help you connect with fitness coaches who provide advice, encouragement, and personal training. Users can locate and follow instructors who offer a variety of training options, including strength and cardio, yoga, and active training. The platform facilitates personal fitness journeys by connecting users with professionals and providing training ideas and updates on coach-led sessions.

Navigation details:

1. Clicking the Course button will navigate to the Course page.
2. Clicking the Live button will navigate to the Live page.
3. Clicking the Plans button will navigate to the Plans page.
4. Clicking the Today button will navigate to the Today page.
5. Clicking the Social button will navigate to the Social page.
6. Clicking the Profile button will navigate to the Profile page.

Today Page:

The Today page is where you may track your daily exercise activity, food, and progress. This is an overview of your everyday journey, highlighting your achievements accomplished and more.

Navigation details:

1. Clicking the Home button will navigate to the Home page.
2. Clicking the Social button will navigate to the Social page.
3. Clicking the Profile button will navigate to the Profile page.

Social Page:

The Social Page is intended to enable users to share their fitness journeys, connect with friends, gain inspiration from others, join communities, and take accountability.

Navigation details:

1. Clicking the Home button will navigate to the Home page.
2. Clicking the Today button will navigate to the Today page.
3. Clicking the Profile button will navigate to the Profile page.
4. Clicking the Post button will navigate to the Post page.
5. Clicking the Chat button will navigate to the Chat page.

Post Page:

The Post Page is intended to allow users to share their updates, accomplishments, and experiences with the fitness community. It invites people to reflect on their experiences, celebrate milestones, and communicate with others. The online platform encourages participation and accountability by providing a venue for sharing and receiving criticism, inspiration, and support.

Navigation details:

1. Clicking the Back button or Post button will navigate to the Social page.

Chat Page:

The Chat page is designed to allow users to communicate directly with friends, coaches and groups within the app. This allows for real-time communication on fitness goals, progress and tips, promoting community, accountability and support.

Navigation details:

1. Clicking the Back button will navigate to the Social page.

Profile Page:

The Profile page allows you to view and manage personal information about your fitness, achievements and settings. This page allows users to reflect on their progress, track their goals and personalise their app experience.

Navigation details:

1. Clicking the Personal Profile section will navigate to the Personal Profile page.
2. Clicking the Achievement button will navigate to the Achievement page.
3. Clicking the Personal Data button will navigate to the Personal Data page.
4. Clicking the Target button will navigate to the Target page.
5. Clicking the Today button will navigate to the Today page.
6. Clicking the Social button will navigate to the Social page.
7. Clicking the Home button will navigate to the Home page.
8. Clicking the Devices button will navigate to the Devices page.
9. Clicking the Customer Support button will navigate to the Customer Support page.

Personal-Profile Page:

Users can view and manage their subscribers on their profile page.

Navigation details:

1. Clicking the Edit button will navigate to the Profile-edit page.
2. Clicking the Back button will navigate to the Profile page.

Achievements Page:

The Achievements page motivates users by displaying the number of steps and badges they have earned during their fitness journey.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Customer Support Page:

The Customer Support Page provides a platform for users to request assistance, solve issues, and receive answers to questions about the app's features or functionality.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Devices Page:

The Device page enables users to connect and manage external fitness gadgets such as smartwatches, fitness bands, digital scales, and heart rate monitors. It improves the app's function by allowing automatic data syncing of variables such as phases, heart rate, sleep patterns, and body composition.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Personal Data Page:

The Personal Data page is where you can view, manage and update your basic fitness data and fitness-related settings. The page allows you to view key statistics such as weight, height and body measurements briefly so you can track your progress, ensure your data is accurate and receive personalised support.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Target Page:

On the Target page, you can set, manage, and track your fitness goals, including weight loss, exercise frequency, and changes in body measurements.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Profile-Edit Page:

User can update your personal data, fitness measurements and preferences on the Profile-edit page. This page allows you to ensure that the data in your profile is accurate and matches your current health record.

Navigation details:

1. Clicking the Back button will navigate to the Profile page.

Basic UI Flow

Feedback

Potential consumers largely commended the prototype's straightforward navigation, which allowed them to quickly switch between features such as Today, Devices, and Achievements. The clearly labelled and well laid out navigation bar scored high marks for ease of use. The overall layout was rated as visually appealing with a clear design that effectively combines functionality and aesthetics.

Visual progress management features such as charts and progress bars have been praised for their ability to show progress clearly. Many users report that the app is fluid and easy to use, providing easy access to key elements such as training diaries, goal setting and achievements. Live chat and the ability to add devices were praised for their seamless integration and ease of use.

Users found the visualization of progress, particularly the graphs and progress bars, easy to understand and attractive, allowing users to quickly see how they are doing. Milestones and progress indicators on the achievements and goals pages were particularly praised for helping users track their fitness goals and helping to keep them motivated. The overall usability of the app was also praised for providing additional convenience features such as live chat and the ability to add equipment.

Art and Design

The design of this fitness tracking app combines community engagement, motivation, and usability, showing that it understands the needs of its users. The app's blue design and well-organised structure provide a reassuringly professional environment that appeals to a wide range of exercise enthusiasts. The app is easy to navigate with an eye-catching bottom navigation bar and consistent use of icons, fonts and visual elements. This consistency helps users focus on their fitness journey without getting confused or frustrated.

The Set Up page is the first step in the welcome process, where you can enter personal information such as height and weight and personalise your settings. The ability to skip this step provides flexibility for users who want to explore the application before providing specific

information. The main dashboard is the Home page, which provides structured access to trainers, live courses and training programmes. With the help of filters and categories, users can easily find content that fits their fitness goals. The filters page allows users to customise workout length, difficulty level and other preferences to further enhance the user experience. The Today Pages simplifies the process of monitoring your daily activities by providing an organised structure to record your nutrition, physical activity and progress. The app presents the data in an attractive and organised way that not only encourages users to take responsibility but also motivates them to keep up the good work. The Social page allows users to share their progress, find news and interact with other users. The Chat page facilitates one-on-one or group conversations that foster a sense of accountability and community to help you achieve your goals.

The programme puts progress monitoring and motivation at the forefront through an Achievement page that displays badges and milestones in an attractive grid structure. This personalised approach encourages users to celebrate their successes and set higher goals. Progress bars and visual markers give users an accurate view of their progress, while the Goals page allows users to set and track fitness goals. Profile and Edit pages allow users to manage their fitness journey, edit information and track their performance.

The Customer Support page offers tools such as live chat, and FAQs, providing users with multiple avenues of help to ensure that any issues are resolved as quickly as possible. The Personal Data page is simply structured and provides a comprehensive overview of important parameters such as weight, BMI and body measurements to help you monitor your progress. Features such as the Connected Devices Page allow users to synchronise data from wearable devices to accurately track steps, heart rate and other fitness parameters.

All in all, the design of the fitness tracking app is noteworthy because it balances functionality, ease of use, and aesthetics. It combines social interaction, goal setting and monitoring with motivational elements such as milestones and achievements to cater for a wide range of users. The simple and fluid design makes it accessible to users of all levels, and the social features and customisation options make it a fun and engaging app. By developing a platform that encourages, tracks and connects, the app effectively helps users achieve their fitness goals in a fun and important way.

Responsive layout

The Flexible Layout for Fitness Tracking Apps (FTA) aims to adapt to different screen sizes by changing the size and borders of user interface (UI) components to ensure a consistent user experience across all devices. The goal of the mobile presentation is to improve readability and ease of use on smaller screens by using a single-column format and reducing the size of elements. To save space without sacrificing functionality, we resize user interface elements such as buttons and text boxes to reduce padding and margins. Tablet layouts use the larger screen while maintaining a clear and user-friendly interface by adjusting the spacing and slightly increasing the sizes. Two columns might be added to the layout to improve information organization and make it easier for users to access functions. Desktop layouts use multi-column frameworks to display more information simultaneously, like charts and user details side by side and further resize parts to accommodate broader screens. The program delivers a responsive design that preserves consistency and usability across all device types by modifying limits and sizes instead of entirely rewriting layouts.

Here are the prototypes that are accessible to different devices:
